GitHub: <https://github.com/bibekgiri4208>

Technology-oriented undergraduate with hands-on experience in full-stack web and interactive application systems. Experienced in building real-world web projects using PHP, JavaScript, HTML and CSS, including database-driven systems and API-like workflows. Also exploring Unity game development through personal projects focused on physics and gameplay system. Currently building a 3D car racing game with emphasis on physics-based vehicle handling, responsive gameplay feel, and system-driven design. Interested in gameplay programming, UI systems, and game mechanics development.

Education

Bachelor's Degree in Information Technology (BIT)

Gandaki University, Pokhara

8th Semester Running

TECHNICAL SKILLS:**Web Development**

- HTML
- CSS
- JavaScript
- PHP (XAMPP)
- CRUD Systems
- Basic Backend Development

Tools

- Git
- GitHub
- Figma
- VS Code
- Visual Studio

PROJECTS:

Parcel Delivery System (Web Project)

- Built full-stack system using PHP + XAMPP
- Implemented booking system with vehicle selection workflow
- Integrated Leaflet maps for pickup & delivery location selection
- Created admin dashboard for managing deliveries and assignments
- Created rider dashboard for viewing the assigned deliveries as well as to view calculated income over period of time.
- Customer Loyalty system (bronze, silver and gold rank), customer gets perks based on their ranks. Eg: Higher rank customer gets High priority for transportation service.

Hangman Game

- Developed an interactive Hangman game using HTML, CSS, and JavaScript.
- Implemented core game logic including word selection, letter guessing, win/lose conditions, and game reset functionality.
- Used DOM manipulation to dynamically update the UI based on user input and game state.
- Handled user interactions through event listeners for real-time gameplay experience.
- Designed a responsive and simple user interface for smooth browser-based gameplay.
- Leaderboard to track the player win/lose status.

TicTacToe Game

- Developed an interactive Tic Tac Toe game using HTML, CSS, and JavaScript.
- Implemented game logic for turn-based player interaction, win detection, and draw conditions.
- Used JavaScript DOM manipulation to dynamically update the board state in real time.
- Handled user events to ensure smooth and responsive gameplay experience.

- Designed a clean and minimal UI for easy interaction and readability during gameplay.

Car Racing Game (Currently in Progress)

- **Physics-Based Handling:** A complete Rigidbody-based car controller utilizing correct Center of Mass physics and a simulated Body Tilt system where the car body dynamically tilts to reflect the shift in momentum.
- **Drift & Traction Mechanics:** Fine-tuned mechanics that allow for satisfying Drift Physics, complete with a dynamic system that generates Wheel Skid Marks on the track based on drifting activity.
- **Audio & Visual Feedback Loops:** An engine audio system that shifts pitch based on Gear-Based Engine Audio cues, simulating transmission sound.
- **Working Brake Lights** that react to player input.
- **Adaptive Camera System:** A dynamic speed-based chase camera where the FOV increases as the car accelerates, paired with smooth cinematic tilts to emphasize velocity.
- **Visual Polish:** Implementation of global illumination, volumetric fog, motion blur, and SMAA Anti-Aliasing to ensure a high-fidelity visual experience on modern hardware.
- **Developer Controls:** Built-in keyboard and full Gamepad Controller Support to ensure accessibility and tight control across input methods.
- **Dynamic Garage System** for car selection.
